

VENTZONE IAQ

NEW TECHNOLOGY BREAKTHROUGH!

Whole House IAQ and Whole House Bathroom Ventilation in a Single System.

Replace noisy spot bathroom fans with a quiet, efficient and effective IAQ central ventilation system.

IAQ Ventilation

While the bathroom is unoccupied the ZRT draws a constant low volume of stale air from the bathrooms through Constant Airflow Regulators.

Ventilation Boost

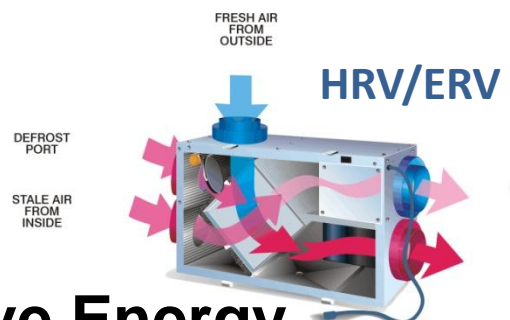

When the bathroom is in use, the ZRT motorized damper opens and the micro-switch triggers the HRV/ERV to boost to high speed.

Maximum Ventilation

While the ZRT is open up to 200 cfm of stale air can be removed from the bathroom effectively and silently.

The Constant Airflow Regulators are automatic self balancing and capable of holding airflow to a constant low volume to conserve energy.

Save Energy

The stale air from the bathrooms is used to condition the temperature of the fresh air being introduced into the home.

- The EPA reports that air inside homes is up to 5 times more polluted than outdoor air. Tightly sealed homes need ventilation.
- The VentZone IAQ system recovers up to 80% of the energy (heat/cool) from the stale air being exhausted and uses it to condition fresh air being introduced.
- Constant ventilation at a low rate is more effective than intermittent ventilation at high rates.
